Fenitrothion 1000 (6ppm-12ppm)	5L	833-416
Fenitrothion 1000 (6ppm-12ppm)	20L	3333-1666

Things to consider before purchasing Conserve Plus :

- I have an NGR number. The sale cannot proceed without an NGR number, as this agency will be audited for compliance.
- I understand spinosad has a 1 application restriction over the life of the commodity.
- I am treating my grain grown on the property where it will be stored.

Keep this decision tree to remember the OP selection rationale and prompt WHP expiry date recording once treatment occurs.

- Conserve™ Plus requires the addition of a mixing partner as it does not control all insects.
- Conserve™ Plus controls 4 insects for up to 9 months. Carefully follow the decision tree to select the suited OP partner.
- Fenitrothion low and high rate manages insects for up to 3 and 6 months respectively.
- The high rate of fenitrothion imposes a 90 day WHP, even though Conserve™ Plus is nil WHP.
